

# Polyclonal Antibody Development Services

The Polyclonal Antibody, available from a wide variety of host animals, is a widely used research and diagnostic tool.

Their unique characteristics give them the capability to bind to multiple epitopes of a single antigen. This makes polyclonal antibodies a flexible and reliable tool for researchers and developers of diagnostic assays. ProSci's Custom Antibody Services Team has over 25+ years' experience in designing, developing, and purifying polyclonal, monoclonal, and recombinant antibodies.

## Partner with ProSci & Receive:

- Quick response & project turnaround times
- Reliable, trusted, and industry trained project managers
- Affordable & customizable services
- Production of high avidity, ready-to-use antibodies

## Diverse Selection of Host Species Available for Immunization

Custom Polyclonal Antibody Services  
& Full Packages

ProSci Incorporated
